

Name: ZOHAIB HASSAN SOOMRO

RollNo#: 19SW42

Subject: DBS

a)

## EXAMPLE:(MUET CASE STUDY)

MUET contains many faculties. Each of the faculty is identified by a unique faculty ID number. And has a name.

There are many departments in each of the faculty. Each department has a unique department ID number and a name.

Every teacher has a unique teacher ID, name, father's name, mobile number, CNIC number and is associated with one of the department.

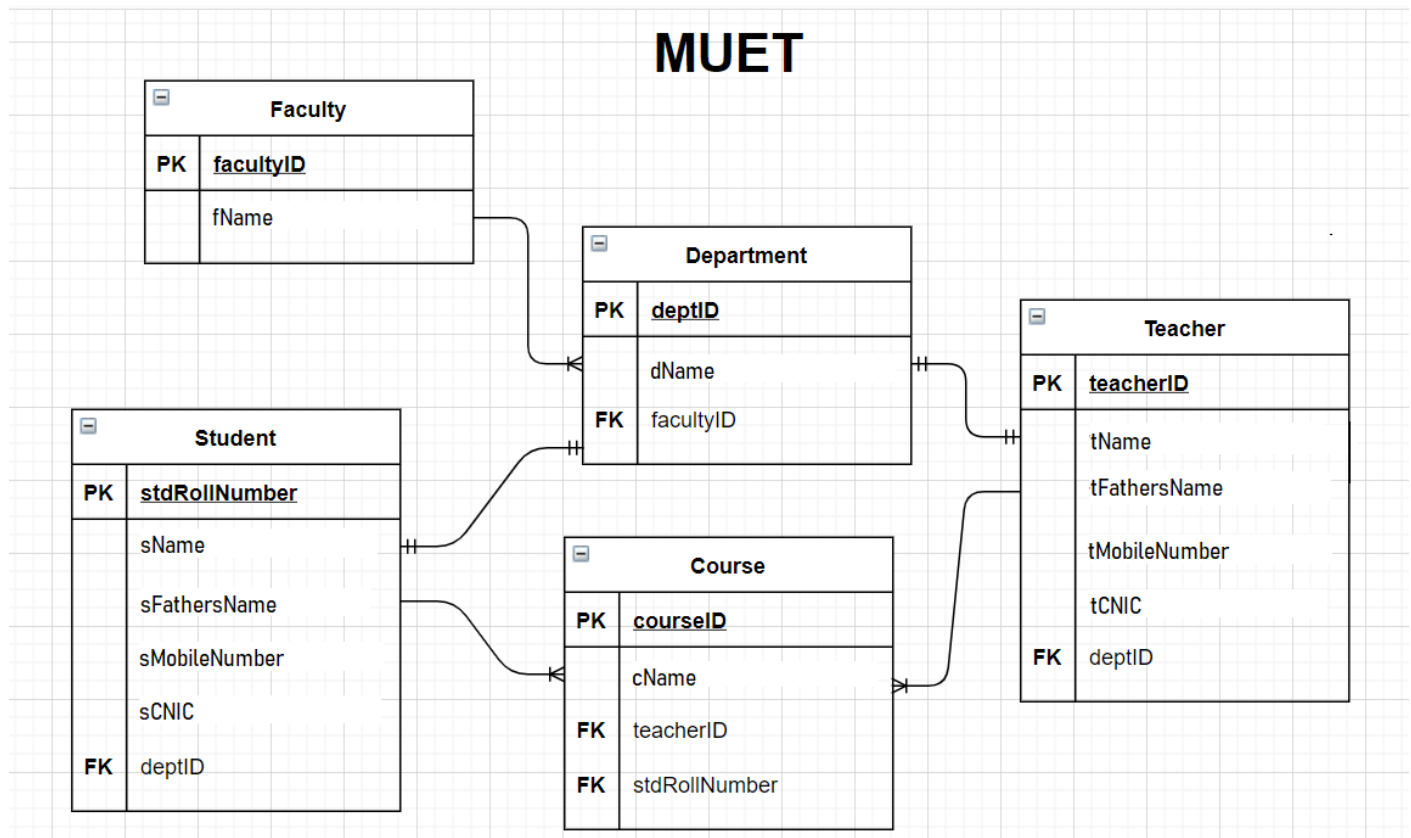

Every student has a unique roll number, name, father's name, mobile number, CNIC number and is associated with one of the department.

A teacher can teach multiple courses during a session.

A student can take multiple courses during the session.

Every course is identified by a unique course ID number and has course name.

Ans:

b) convert the entitites into tables and attributes in columns of the table.

Below diagram shows that the tables are in normalized form

**Perform** Combining Tables method on the tables shown in diagram

<u>FacID</u>	<u>Facname</u>

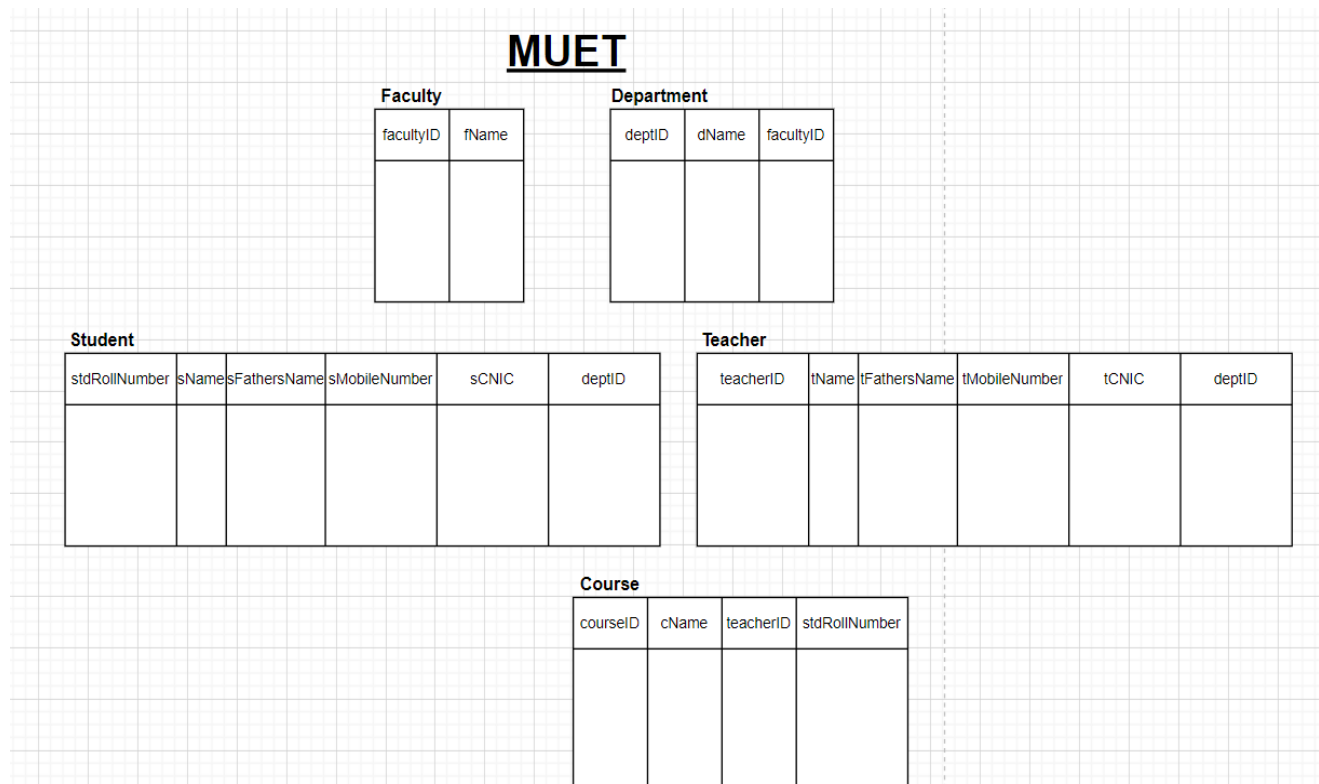

<u>st_ID</u>	<u>st_name</u>

<u>c_id</u>	<u>c_name</u>

<u>T_ID</u>	<u>T_name</u>

<u>Deptno</u>	<u>dname</u>

**Ans:**

c) To convert it in denormalization, combine all the tables to make it a single table

[illegible]

**Ans:**

MUET

### Denormalized Table

[illegible]
